

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1-72. (Canceled)

73. (Currently Amended) A method comprising:

receiving, at a terminal, a request to ~~tune to present~~ a program being transmitted by a provider, wherein the request is received after a start time of program transmission;

monitoring, by the terminal, a length of time during which a user device has been presenting the program;

determining, by the terminal, that ~~a user terminal has remained tuned to the program for the length of time exceeds~~ a predetermined threshold amount of time;

generating and communicating a request to the provider to retrieve a copy of a portion of the program in response to the request to ~~tune to present~~ the program and said determining; and

receiving the copy of the portion of the program, wherein the portion comprises the program transmitted between the start time and a receipt time of the request to ~~tune to present~~ the program.

74. (Currently Amended) The method of claim 73, further comprising generating a prompt requesting approval prior to generating the request to retrieve the copy.

75. (Currently Amended) The method of claim 73, ~~wherein the request is automatically generated and communicated to the provider~~ further comprising causing the user device to present the copy of the portion of the program.

76. (Previously Presented) The method of claim 73, wherein the copy does not include the portion of the program transmitted after the receipt time.

77. (Previously Presented) The method of claim 73, further comprising:

receiving a channel selection during transmission of the program;
receiving a request for a synopsis of the program during transmission of the program;
upon receipt of the request for the synopsis, identifying a portion of the program that has been transmitted as of an identified clock time; and
causing presentation of the synopsis of the program that summarizes the portion of the program that has been transmitted from a beginning of program transmission until the identified clock time.

78. (Previously Presented) The method of claim 77, wherein the synopsis is presented in a fast forward mode.

79. (Currently Amended) The method of claim 77, further comprising determining that the user terminal device has maintained the channel selection for a predefined period of time before causing presentation of the synopsis.

80. (Currently Amended) An apparatus comprising:
a storage medium; and
a controller operatively coupled to the storage medium, the controller being configured to cause the apparatus to perform operations comprising:
receiving a request to tune to present a program being transmitted by a provider, wherein the request is received after a start time of program transmission;
monitoring a length of time during which a user device has been presenting the program;
determining that a user device has remained tuned to the program for the length of time exceeds a predetermined threshold amount of time;
retrieving a copy of a portion of the program in response to said request and said determining; and
transmitting causing presentation of the copy of the portion of the program, wherein the portion comprises the program transmitted between the start time and a receipt time of the request to tune to present the program.

81. (Currently Amended) The apparatus of claim 80, wherein the controller is configured to cause the apparatus to generate a prompt requesting approval prior to ~~generating the request retrieving the copy.~~

82. (Currently Amended) The apparatus of claim 80, wherein the controller is configured to cause the apparatus to automatically generate and communicate ~~the-a request to retrieve the copy.~~

83. (Previously Presented) The apparatus of claim 80, wherein the copy does not include the portion of the program broadcasted after the receipt time.

84. (Previously Presented) The apparatus of claim 80, wherein the controller is configured to cause the apparatus to perform:

receiving a channel selection during transmission of the program;

receiving a request for a synopsis of the program during transmission of the program;

upon receipt of the request for the synopsis, identifying a portion of the program that has been transmitted as of an identified clock time; and

causing presentation of the synopsis that summarizes the portion of the program that has been transmitted from a beginning of program transmission until the identified clock time.

85. (Previously Presented) The apparatus of claim 84, wherein the synopsis is presented in a fast forward mode.

86. (Currently Amended) The apparatus of claim 84, wherein the controller is configured to determine that the ~~channel selection user-device has been maintained the channel selection~~ for a predefined period of time before causing presentation of the synopsis.

87. (Currently Amended) A method comprising:

causing, by a server, transmission of a program to a ~~user-terminal~~;

receiving a request from the ~~user-terminal~~ that requests a copy of a portion of the program; and

causing, in response to a determination that the-a user terminal-device has remained tuned to the programbeen presenting the program for a length of time in excess of a predetermined threshold amount of time, transmission of a-the copy of a-the portion of the program to the user-terminal, and wherein the portion of the program comprises the program transmitted between a start time of the program and a second time corresponding to when the user device first presented the program.

88. (Previously Presented) The method of claim 87, wherein the copy of the portion of the program comprises a complete copy of the program.

89. (Previously Presented) The method of claim 87, wherein the copy of the portion of the program comprises less than a complete copy of the program.

90. (Currently Amended) A system comprising:

a data storage device; and

a server operatively coupled to the data storage device, the server being configured to cause the system to perform operations comprising:

causing transmission of a program to a user-terminal;

receiving a request from the user-terminal that requests a copy of a portion of the program; and

causing, in response to a determination that the-a user terminal-device has remained tuned tobeen presenting the program for a length of time in excess of a predetermined threshold amount of time, transmission of a-the copy of a-the portion of the program to the user-terminal, wherein the portion of the program comprises the program transmitted between a start time of the program and a second time corresponding to when the user device first presented the program.

91. (Previously Presented) The system of claim 90, wherein the copy of the portion of the program comprises a complete copy of the program.

92. (Previously Presented) The system of claim 90, wherein the copy of the portion of the program comprises less than a complete copy of the program.
